

Anti-Carbonation Protection

Concrete structures are constantly exposed to environmental pollutants. Carbon dioxide (CO₂) penetrates concrete, lowering pH levels and corroding the steel inside. This weakens the structure and shortens its lifespan. Kataline's Anti-Carbonation Protection creates a reliable, breathable shield that enhances durability, ensures safety, and reduces long-term maintenance.

Silent Defence

Always active, continuously blocking CO₂ ingress and corrosion

Breathes Right

Allows trapped moisture to escape, preventing cracks and spalling.

Weatherproof Strength

Withstands rain, UV, and temperature extremes for decades.

Application Areas

Bridges & Highways | Parking Garages | Industrial Plants & Silos | Urban Infrastructure

**Built for Durability -
Protecting concrete, every second of the day**
