FLEXIPAVE

— Aggregate Based Permeable Paving —

Paving theWay to a Beautiful, Sustainable Future

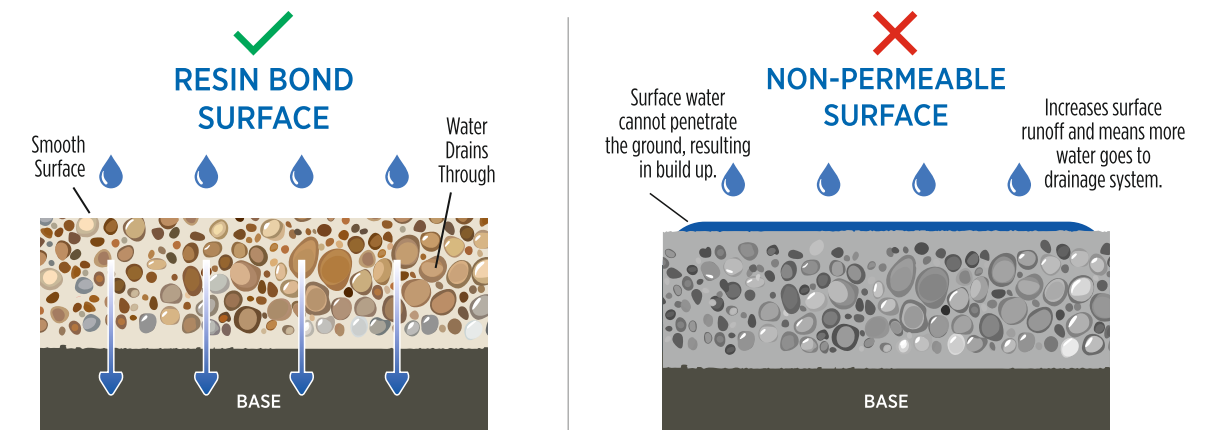

INTRODUCTION

Kataline Flexipave is a resin-bound permeable paving system designed for pedestrian and vehicular traffic. Its open matrix allows water drainage, preventing puddling and aiding SuDS compliance. Suitable for bases and sub-bases, it reduces flood risk. Edges should be made with brick, stone, timber or steel for protection.

WHY CHOOSE FLEXIPAVE AGGREGATE BASED PERMEABLE PAVING?

Flexipave porous aggregate paving system is at the forefront of innovative surfacing technology, offering top-quality resin products for driveways, pathways, patios, and commercial spaces.

-  **Durable and Strong**
-  **Aesthetically Pleasing**
-  **Easy to Maintain**

Our surfacing is water friendly and incorporates recycled materials while maintaining high standards to ensure product quality. Permeable surfaces prevent water stagnation when applied over suitable bases. Finished manually or with power trowels, our surfaces are durable, UV-stable, and permeable, offering a smooth finish.

FLEXIPAVE : WATER DRAINAGE AND URBAN SPACE BENEFITS

-  **Permeable Surface Design**
Allows water to pass through, preventing water pooling and promoting natural drainage.
-  **Weather Resistance**
Withstands varying weather conditions, ensuring longevity and durability.
-  **Easy to Clean**
Resistant to stains and easy to maintain with minimal effort
-  **Safety**
Provides a non-slip surface that remains safe even during and after rain.
